

## FS1 SERIES SUCTION STRAINERS

FS1 suction strainers are designed for direct mounting on the suction line, immersed in the oil tank, to protect the pump from coarse contamination.

### TECHNICAL INFORMATION

#### HYDRAULIC SYMBOL

#### CONNECTION PORTS

from G 3/8" to G 4"

#### MATERIALS:

Threaded connector:	Polyamide reinforced
End cap:	Zinc plated steel
Internal core:	Zinc plated steel
Bypass valve:	Polyamide reinforced

#### FILTER MEDIA:

Stainless steel wire mesh (125  $\mu\text{m}$  and 60  $\mu\text{m}$ )  
Zinc plated steel wire mesh (250  $\mu\text{m}$ )

#### BYPASS VALVE:

setting 0,35 bar

#### DIFFERENTIAL COLLAPSE PRESSURE:

1 bar (ISO 2941)

#### OPERATING TEMPERATURE RANGE:

-20°C to 100°C

#### FLUID COMPATIBILITY:

Full with HH-HL-HM-HV (acc. to ISO 2943).

For use with other fluid applications please contact Filtrec Customer Service ([info@filtrec.it](mailto:info@filtrec.it)).

**SIZES 10 to 40**

MODEL	A	B	C	D	FLOW RATE l/min (*)	WEIGHT Kg
FS110B2T125---	G 3/8"	46	91	36	16	0,10
FS111B3T125---	G 1/2"	46	106	36	26	0,12
FS120B4T125---	G 3/4"	64	109	50	45	0,20
FS121B5T125---	G 1"	64	139	50	65	0,22
FS130B6T125---	G 1 1/4"	86	139	65	110	0,36
FS133B7T125---	G 1 1/2"	86	200	65	150	0,40
FS134B8T125---	G 2"	86	260	75	240	0,50
FS140B8T125---	G 2"	150	151	110	240	0,80
FS142B9T125---	G 2 1/2"	150	212	110	380	0,98
FS143B10T125---	G 3"	150	272	110	500	1,10

--- no by-pass

B with by-pass (subject to MOQ)

 T60 60  $\mu\text{m}$  (subject to MOQ)

 T125 125  $\mu\text{m}$ 

 T250 250  $\mu\text{m}$  (subject to MOQ)

N.B. The Flow Rate values given in the table refer to  $\Delta p$  0,02 bar bar with clean element and oil having viscosity 32 cSt and density 0,875 Kg/dm<sup>3</sup>.

For different flow rates verify the pressure drop on the diagrams at page 3.

## PRESSURE DROP DIAGRAMS

The pressure drop of these strainers is related to the connection size, indicated in the box. The maximum recommended pressure drop is 0,02 bar.

N.B. The above diagrams have been obtained at the FILTREC laboratory, according to the ISO 3968 specification, with oil having viscosity 32 cSt and density 0,875 Kg/dm<sup>3</sup>.

**SIZES 50 to 91**

MODEL	A	B	C	D	FLOW RATE l/min (*)	WEIGHT Kg
FS150B2T125	G 3/8"	54	83	27	16	0,12

T125	125 $\mu\text{m}$
T250	250 $\mu\text{m}$ (subject to MOQ)

N.B. The Flow Rate values given in the table refer to  $\Delta p$  0,02 bar with clean element and oil having viscosity 32 cSt and density 0,875 Kg/dm<sup>3</sup>.

For different flow rates verify the pressure drop on the diagrams at page 5.

## PRESSURE DROP DIAGRAMS

The pressure drop of these strainers is related to the connection size, indicated in the box.  
 The maximum recommended pressure drop is 0,02 bar.

N.B. The above diagrams have been obtained at the FILTREC laboratory, according to the ISO 3968 specification, with oil having viscosity 32 cSt and density 0,875 Kg/dm<sup>3</sup>.

## USER TIPS

---

The suction strainer must be always largely sized to avoid any possible cavitation of the pump and port size equal or larger than the pump port.

The strainer must remain under the oil level in any operating condition.

The lower side of the strainer must be at a proper distance from the tank bottom, to avoid any risk of sucking deposited contamination or sludge.

The strainer must be located the most possible far away of the return filter's outlet; if not possible we recommend that a baffle keeps separate the return area from the suction area.

Here aside some mounting examples.
